Title: Need to construct cement-concrete embankment to check soil erosion caused by tidal waves in 'Diviseema' area of Krishna district, Andhra Pradesh -Laid.

PROF. UMMAREDDY VENKATESWARLU (TENALI): Tenali constituency in Andhra Pradesh is on the coastal line of Bay of Bengal. There is frequent erosion of soil on the coast due to high level tidal waves particularly in `Diviseema' area of Krishna District.

On several occasions it was represented that there is need for construction of pucca, cement concrete tidal banks to arrest erosion and save valuable private land and habitations and other properties. I urge upon the Government, Department of Ocean Development to take up survey of such vulnerable spots on the coast and construct cement-concrete tidal banks to check the soil erosion.
